Hot spot = a cluster of stations with high values (Getis-Ord G_i^*). Risk score is PROVISIONAL: $100 \times (0.6 \times \text{percentile rank of the station's average yearly level} + 0.4 \times \text{percentile rank of its trend slope})$, among the 102 stations. Coverage: 47 stations in North America, 30 in Oceania, 24 in Europe, 1 in Asia; none in Africa or South America. Not a global network.
