

P4 Wet vs dry

P4 Scatter

P4 Rain trend map

Heavy rain = top 5% of the station’s wet days. Rain trend map: change in heavy-rain days per decade (blue = more, orange = fewer). Scatter: one dot per station; x = average warm-spell days, y = average longest dry spell, size = average compound (hot + dry) days. Dry spells are a dry-regime measure, not an official drought. This page always shows Heavy rain and Dry spells, whatever the Event Label dropdown says.
